

AN INDUCTION PRINCIPLE FOR THE WEIGHTED p -ENERGY MINIMALITY OF $x/\|x\|$

JEAN-CHRISTOPHE BOURGOIN

ABSTRACT. In this paper, we investigate minimizing properties of the map $x/\|x\|$ from the Euclidean unit ball \mathbf{B}^n to its boundary \mathbb{S}^{n-1} , for the weighted energy functionals $E_{p,\alpha}^n(u) = \int_{\mathbf{B}^n} \|x\|^\alpha \|\nabla u\|^p dx$. We establish the following induction principle: if the map $\frac{x}{\|x\|} : \mathbf{B}^{n+1} \rightarrow \mathbb{S}^n$ minimizes $E_{p,\alpha}^{n+1}$ among the maps $u : \mathbf{B}^{n+1} \rightarrow \mathbb{S}^n$ satisfying $u(x) = x$ on \mathbb{S}^n , then the map $\frac{y}{\|y\|} : \mathbf{B}^n \rightarrow \mathbb{S}^{n-1}$ minimizes $E_{p,\alpha+1}^n$ among the maps $v : \mathbf{B}^n \rightarrow \mathbb{S}^{n-1}$ satisfying $v(y) = y$ on \mathbb{S}^{n-1} .

This result enables us to enlarge the range of values of p and α for which $x/\|x\|$ minimizes $E_{p,\alpha}^n$.

1. INTRODUCTION AND STATEMENT OF MAIN RESULTS

Let \mathbf{B}^n be the unit Euclidean ball of \mathbb{R}^n and \mathbb{S}^{n-1} its boundary. For any couple (α, p) of real numbers, with $\alpha \geq 0$ and $p \geq 1$, we define the r^α -weighted p -energy functional of a map $u : \mathbf{B}^n \rightarrow \mathbb{S}^{n-1}$ by

$$E_{p,\alpha}^n(u) = \int_{\mathbf{B}^n} \|x\|^\alpha \|\nabla u\|^p dx.$$

This functional is nothing but the p -energy functional associated with the Riemannian metric $r^{\alpha(n-p)}g_{\text{euc}}$ on the ball \mathbf{B}^n , where g_{euc} is the Euclidean metric, the sphere \mathbb{S}^{n-1} being endowed with its standard metric. The functional $E_{p,\alpha}^n$ is to be considered on the Sobolev space

$$W_\alpha^{1,p}(\mathbf{B}^n, \mathbb{S}^{n-1}) = \{u \in W^{1,p}((\mathbf{B}^n, r^{\alpha(n-p)}g_{\text{euc}}), \mathbb{R}^n); \|u\| = 1a.e\}.$$

The question is to know which map minimizes $E_{p,\alpha}^n$ among the maps in $W_\alpha^{1,p}(\mathbf{B}^n, \mathbb{S}^{n-1})$ satisfying $u(x) = x$ on \mathbb{S}^{n-1} .

Following the arguments of Hildebrandt, Kaul and Widman [11], the map $x/\|x\|$ is a natural candidate to be the minimizer of $E_{p,\alpha}^n$, for $p \in [1, n + \alpha)$ (notice that $x/\|x\| \in W_\alpha^{1,p}(\mathbf{B}^n, \mathbb{S}^{n-1})$ if and only if $p < n + \alpha$).

The minimality of $x/\|x\|$ was first established for the 2-energy functional $E_2^n := E_{2,0}^n$ by Jäger and Kaul [14] in dimension $n \geq 7$, then by Brezis, Coron and Lieb [2] in dimension 3. Coron and Gulliver [5] actually proved the minimality of $x/\|x\|$ for the p -energy functional $E_p^n := E_{p,0}^n$ for any integer $p \in \{1, \dots, n-1\}$ and any dimension $n \geq 3$. An alternative proof using the null Lagrangian method (or calibration method) of this last result was obtained by Lin [15] and Avellaneda and Lin [1].

Hardt and Lin [7, 8] and Hardt, Lin and Wang [9, 10] developed the study of the singularities of p -harmonic and p -minimizing maps and obtained results extending those of Schoen and Uhlenbeck [16, 17]. A consequence of their results is the minimality of $x/\|x\|$ for E_p^n for any $p \in (n-1, n)$.

Finally, Hong [12] and Wang [18] have proved independently the minimality of $x/\|x\|$ for E_p^n in dimension $n \geq 7$ for any $p \leq n - 2\sqrt{n-1}$.

In order to close the question of the E_p^n -minimality of $x/\|x\|$ for the remaining values of p , Hong [13] suggested a new idea. Indeed, he observed that, for any $p \in (2, n)$, the minimality of $x/\|x\|$ for E_p^n follows from the minimality of $x/\|x\|$ for the r^{2-p} -weighted 2-energy $E_{2,2-p}^n$. Unfortunately, we have proved in a previous paper [3], the existence of an interval of values of $p \in (1, n-1)$ for which the map $x/\|x\|$ fails to be a minimizer of $E_{2,2-p}^n$. Nevertheless, we proved that $x/\|x\|$ minimizes the r^α -weighted p -energy $E_{p,\alpha}^n$ for any $\alpha \geq 0$ and any integer $p \leq n-1$. Actually, we obtained in [4] the minimality of $x/\|x\|$ for more general weighted p -energy functionals of the form $E_{p,f}^n(u) = \int_{\mathbf{B}^n} f(\|x\|) \|\nabla u\|^p dx$, where $p \leq n-1$ is an integer and $f : [0, 1] \rightarrow \mathbb{R}^+$ is a continuous non-decreasing function.

Our aim in this paper is to show that the minimizing properties of $x/\|x\|$ in dimension n and $n+1$ are not independent. Indeed, we will prove that, for any $p \in [1, n+\alpha+1)$, if $x/\|x\|$ minimizes the r^α -weighted p -energy $E_{p,\alpha}^{n+1}$ in dimension $n+1$, then it also minimizes the $r^{\alpha+1}$ -weighted p -energy $E_{p,\alpha+1}^n$ in dimension n .

Theorem 1. *Let $n \geq 2$ be an integer, $\alpha \geq 0$ be a real number and $p \in [1, n+\alpha+1)$. If the map $\frac{x}{\|x\|} : \mathbf{B}^{n+1} \mapsto \mathbb{S}^n$ minimizes the r^α -weighted p -energy $E_{p,\alpha}^{n+1}$ among the maps $u \in W_\alpha^{1,p}(\mathbf{B}^{n+1}, \mathbb{S}^n)$ satisfying $u(x) = x$ on \mathbb{S}^n , then the map $\frac{y}{\|y\|} : \mathbf{B}^n \mapsto \mathbb{S}^{n-1}$ minimizes the $r^{\alpha+1}$ -weighted p -energy $E_{p,\alpha+1}^n$ among the maps $v \in W_{\alpha+1}^{1,p}(\mathbf{B}^n, \mathbb{S}^{n-1})$ satisfying $v(y) = y$ on \mathbb{S}^{n-1} .*

The proof of this theorem relies on a construction which associates to each map $u : \mathbf{B}^n \rightarrow \mathbb{S}^{n-1}$ such that $u(y) = y$ on \mathbb{S}^{n-1} , a map $\bar{u} : \mathbf{B}^{n+1} \rightarrow \mathbb{S}^n$ such that $\bar{u}(x) = u(x)$ in $\mathbf{B}^n \times \{0\}$ and $\bar{u}(x) = x$ on the unit sphere \mathbb{S}^n , in such a way that, if u_0 is the map defined in \mathbf{B}^n by $u_0(y) = \frac{y}{\|y\|}$, then \bar{u}_0 is exactly the map defined on \mathbf{B}^{n+1} by $\bar{u}_0(x) = \frac{x}{\|x\|}$. The energy $E_{p,\alpha}^{n+1}(\bar{u})$ of \bar{u} is estimated above in terms of the energy $E_{p,\alpha+1}^n(u)$ of u and the equality holds in the estimate for the map $u_0 = \frac{y}{\|y\|}$.

Thanks to Theorem 1 and the minimality results mentioned above, we deduce the following :

Corollary 1. *The map $y/\|y\|$ minimizes $E_{p,\alpha}^n$ among the maps in $W_\alpha^{1,p}(\mathbf{B}^n, \mathbb{S}^{n-1})$ which coincide with $y/\|y\|$ on \mathbb{S}^{n-1} in the following cases :*

- i) $\alpha \in \mathbb{N}$ and $p \in (n+\alpha-1, n+\alpha)$,
- ii) $\alpha \geq \beta$ and p is an integer in $\{1, \dots, n+\beta-1\}$, for any real number $\beta \geq 0$.
- iii) $\alpha \in \mathbb{N}$, $n+\alpha \geq 7$ and $p \leq n+\alpha-2\sqrt{n+\alpha-1}$,

1.1. Construction of \bar{u} and proof of Theorem 1.1. Let \mathbf{B}^{n+1} and \mathbb{S}^n be the unit open ball and the unit sphere of \mathbb{R}^{n+1} and let \mathbf{B}^n and \mathbb{S}^{n-1} be the unit open ball and the unit sphere of \mathbb{R}^n that we identify with the subspace $\mathbb{R}^n = \mathbb{R}^n \times \{0\}$ in \mathbb{R}^{n+1} . Moreover, we write $x = (x_1, \dots, x_n, x_{n+1})$ a vector of \mathbb{R}^{n+1} , $y = (y_1, \dots, y_n)$ a vector of \mathbb{R}^n , $\langle \cdot, \cdot \rangle$ the standard metric of \mathbb{R}^{n+1} and $(e_1, \dots, e_n, e_{n+1})$ the standard basis of \mathbb{R}^{n+1} .

Let Π_n be the projection defined by :

$$\begin{aligned}\Pi_n : \mathbf{B}^{n+1} &\longrightarrow \mathbf{B}^n \\ (x_1, \dots, x_{n+1}) &\longrightarrow (x_1, \dots, x_n, 0) = (x_1, \dots, x_n).\end{aligned}$$

Consider the map φ_n defined on $B^n \setminus \mathbb{R}e_{n+1}$ by $\varphi_n(x) = \frac{\Pi_n(x)}{\|\Pi_n(x)\|}$.

We define the map \bar{u} defined by

$$\begin{aligned}\bar{u} : \mathbf{B}^{n+1} &\longrightarrow \mathbf{B}^n \\ x &\longrightarrow \langle e_{n+1}, \frac{x}{\|x\|} \rangle e_{n+1} + \langle \varphi_n(x), \frac{x}{\|x\|} \rangle u(\|x\| \varphi_n(x)).\end{aligned}$$

Lemma 1. For any $x \in \mathbf{B}^{n+1}$, $\|\nabla \bar{u}(x)\|^2 = \frac{1}{\|x\|^2} + \|\nabla u(\|x\| \varphi_n(x))\|^2$.

Proof. For any $i \in \{1, \dots, n\}$, we have,

$$\begin{aligned}d\bar{u}(x).e_i &= \frac{\langle \Pi_n(x), e_i \rangle}{\|x\|} \left(\frac{1}{\|\Pi_n(x)\|} - \frac{\|\Pi_n(x)\|}{\|x\|^2} \right) u(\|x\| \varphi_n(x)) \\ &\quad - \frac{\langle e_{n+1}, x \rangle \langle x, e_i \rangle}{\|x\|^3} e_{n+1} \\ &\quad + du(\|x\| \varphi_n(x)) \cdot \left(\frac{\langle \Pi_n(x), e_i \rangle \Pi_n(x)}{\|x\|^2} + e_i - \frac{\langle \Pi_n(x), e_i \rangle \Pi_n(x)}{\|\Pi_n(x)\|^2} \right)\end{aligned}$$

and,

$$\begin{aligned}d\bar{u}(x).e_{n+1} &= \frac{e_{n+1}}{\|x\|} - \frac{\langle e_{n+1}, x \rangle^2}{\|x\|^3} e_{n+1} - \frac{\langle e_{n+1}, x \rangle}{\|x\|^3} \|\Pi_n(x)\| u(\|x\| \varphi_n(x)) \\ &\quad + \frac{\langle e_{n+1}, x \rangle}{\|x\|^2} du(\|x\| \varphi_n(x)). \Pi_n(x).\end{aligned}$$

Since $\|u(x)\|^2 = 1$, one has $\langle du(x).h, u(x) \rangle = 0$ for any $h \in \mathbb{R}^n$. Hence, for any $i \in \{1, \dots, n\}$, we have,

$$\begin{aligned}\|d\bar{u}(x).e_i\|^2 &= \frac{\langle \Pi_n(x), e_i \rangle^2}{\|x\|^2} \left(\frac{1}{\|\Pi_n(x)\|} - \frac{\|\Pi_n(x)\|}{\|x\|^2} \right)^2 + \frac{\langle e_{n+1}, x \rangle^2 \langle x, e_i \rangle^2}{\|x\|^6} \\ &\quad + \left\| du(\|x\| \varphi_n(x)) \cdot \left(\langle \Pi_n(x), e_i \rangle \left(\frac{1}{\|x\|^2} - \frac{1}{\|\Pi_n(x)\|^2} \right) \Pi_n(x) + e_i \right) \right\|^2.\end{aligned}$$

$$\begin{aligned}\|d\bar{u}(x).e_{n+1}\|^2 &= \frac{1}{\|x\|^2} \left(1 - \frac{\langle e_{n+1}, x \rangle^2}{\|x\|^2} \right)^2 + \frac{\langle e_{n+1}, x \rangle^2}{\|x\|^6} \|\Pi_n(x)\|^2 \\ &\quad + \frac{\langle e_{n+1}, x \rangle^2}{\|x\|^4} \|du(\|x\| \varphi_n(x)). \Pi_n(x)\|^2.\end{aligned}$$

Finally, we have,

$$\|\nabla \bar{u}(x)\|^2 = \frac{1}{\|x\|^2} + \|\nabla u(\|x\| \varphi_n(x))\|^2. \quad \blacksquare$$

Let x_{n+1} be a real number in $(0, 1)$, consider the set $A_{x_{n+1}} = (x_{n+1}e_{n+1} + e_{n+1}^\perp) \cap \mathbf{B}^{n+1} \setminus \mathbb{R}e_{n+1}$, where e_{n+1}^\perp is the orthogonal subspace to $\mathbb{R}e_{n+1}$ for

$\langle \cdot, \cdot \rangle$. Let θ be the map :

$$\begin{aligned} \theta : A_{x_{n+1}} &\longrightarrow C_{x_{n+1}} = \{y \in \mathbb{R}^n; \|y\| > |x_{n+1}|\} \\ x = (x_1, \dots, x_{n+1}) &\longrightarrow \|x\|\varphi_n(x) = y = (y_1, \dots, y_n). \end{aligned}$$

Lemma 2. *For any $y \in \mathbb{R}^n$, the Jacobian determinant of θ^{-1} is :*

$$Jac(\theta^{-1})(y) = \frac{(\|y\|^2 - x_{n+1}^2)^{\frac{n-2}{2}}}{\|y\|^{n-2}}.$$

Proof For any $i \in \{1, \dots, n\}$ and for any $x \in A_{x_{n+1}}$,

$$d\theta(x).e_i = \left(\frac{1}{\|x\|} - \frac{\|x\|}{\|\Pi_n(x)\|^2} \right) \frac{\langle \Pi_n(x), e_i \rangle}{\|\Pi_n(x)\|} \Pi_n(x) + \frac{\|x\|}{\|\Pi_n(x)\|} e_i.$$

Let us set, for any $i \in \{1, \dots, n\}$,

$$\lambda_i = \left(\frac{1}{\|x\|} - \frac{\|x\|}{\|\Pi_n(x)\|^2} \right) \frac{\langle \Pi_n(x), e_i \rangle}{\|\Pi_n(x)\|} \text{ and } \alpha = \frac{\|x\|}{\|\Pi_n(x)\|}.$$

Hence, for any $i \in \{1, \dots, n\}$,

$$d\theta(x).e_i = \lambda_i \Pi_n(x) + \alpha e_i.$$

Then, for any $x \in A_{x_{n+1}}$,

$$\begin{aligned} Jac(\theta)(x) &= \det(\lambda_1 \Pi_n(x) + \alpha e_1, \lambda_2 \Pi_n(x) + \alpha e_2, \dots, \lambda_n \Pi_n(x) + \alpha e_n) \\ &= \sum_{i=1}^n \det(\alpha e_1, \dots, \alpha e_{i-1}, \lambda_i \Pi_n(x), \alpha e_{i+1}, \dots, \alpha e_n) + \alpha^n \det(e_1, \dots, e_n) \\ &= \sum_{i=1}^n \alpha^{n-1} \lambda_i \det(e_1, \dots, e_{i-1}, \Pi_n(x), e_{i+1}, \dots, e_n) + \alpha^n, \end{aligned}$$

where \det is the determinant in the basis (e_1, \dots, e_{n+1}) .

$$\begin{aligned} Jac(\theta)(x) &= \sum_{i=1}^n \alpha^{n-1} \left(\frac{1}{\|x\|} - \frac{\|x\|}{\|\Pi_n(x)\|^2} \right) \frac{\langle \Pi_n(x), e_i \rangle^2}{\|\Pi_n(x)\|} + \alpha^n \\ &= \alpha^{n-1} \left(\frac{1}{\|x\|} - \frac{\|x\|}{\|\Pi_n(x)\|^2} \right) \frac{\|\Pi_n(x)\|^2}{\|\Pi_n(x)\|} + \alpha^n = \alpha^{n-2}. \end{aligned}$$

Therefore, we have

$$Jac(\theta)(x) = \frac{\|x\|^{n-2}}{\|\Pi_n(x)\|^{n-2}} = \frac{\|y\|^{n-2}}{(\|y\|^2 - x_{n+1}^2)^{\frac{n-2}{2}}}.$$

We deduce that,

$$Jac(\theta^{-1})(y) = \frac{(\|y\|^2 - x_{n+1}^2)^{\frac{n-2}{2}}}{\|y\|^{n-2}}.$$

Lemma 3. For any $x \in \mathbf{B}^{n+1}$, we have,

$$\begin{aligned} \int_{\mathbf{B}^{n+1}} \|x\|^\alpha \|\nabla \bar{u}(x)\|^p dx_1 \cdots dx_{n+1} &\leq n^{p/2-1} \int_{\mathbf{B}^{n+1}} \frac{1}{\|x\|^{p-\alpha}} dx_1 \cdots dx_{n+1} \\ &\quad + 2(1 - 1/n)^{1-p/2} W_{n-1} \int_{\mathbf{B}^n} \|y\|^{\alpha+1} \|\nabla u(y)\|^p dy, \end{aligned}$$

where $W_{n-1} = \int_0^{\pi/2} (\cos(\gamma))^{n-1} d\gamma$.

Proof. Writing $\frac{1}{\|x\|^2} + \|\nabla u(\|x\|\varphi_n(x))\|^2 = \frac{1}{n}(n\frac{1}{\|x\|^2}) + (1-\frac{1}{n})(\frac{1}{1-\frac{1}{n}}\|\nabla u(\|x\|\varphi_n(x))\|^2)$ and using that $x \rightarrow x^{\frac{p}{2}}$ is a convex map, for any $p \in [1, n + \alpha + 1)$, we have,

$$\begin{aligned} \|\nabla \bar{u}(x)\|^p &= \left(\frac{1}{\|x\|^2} + \|\nabla u(\|x\|\varphi_n(x))\|^2 \right)^{p/2} \\ &\leq n^{p/2-1} \frac{1}{\|x\|^p} + (1 - 1/n)^{1-p/2} \|\nabla u(\|x\|\varphi_n(x))\|^p. \end{aligned}$$

Hence,

$$\begin{aligned} \int_{\mathbf{B}^{n+1}} \|x\|^\alpha \|\nabla \bar{u}(x)\|^p dx_1 \cdots dx_{n+1} &\leq n^{p/2-1} \int_{\mathbf{B}^{n+1}} \|x\|^\alpha \frac{1}{\|x\|^p} dx_1 \cdots dx_{n+1} \\ &\quad + (1 - 1/n)^{1-p/2} \int_{\mathbf{B}^{n+1}} \|x\|^\alpha \|\nabla u(\|x\|\varphi_n(x))\|^p dx_1 \cdots dx_{n+1} \\ &\leq n^{p/2-1} \int_{\mathbf{B}^{n+1}} \|x\|^\alpha \frac{1}{\|x\|^p} dx_1 \cdots dx_{n+1} \\ &\quad + 2(1 - 1/n)^{1-p/2} \int_0^1 dx_{n+1} \int_{\mathbf{B}^n} \|x\|^\alpha \|\nabla u(\|x\|\varphi_n(x))\|^p dx_1 \cdots dx_n. \end{aligned}$$

Using the change of variables $y = \theta(x)$ and Lemma 1.2 we get,

$$\begin{aligned} \int_{\mathbf{B}^{n+1}} \|x\|^\alpha \|\nabla \bar{u}(x)\|^p dx_1 \cdots dx_{n+1} &\leq n^{p/2-1} \int_{\mathbf{B}^{n+1}} \frac{1}{\|x\|^{p-\alpha}} dx_1 \cdots dx_{n+1} \\ &\quad + 2(1 - 1/n)^{1-p/2} \int_0^1 dx_{n+1} \int_{C^{n+1}} \frac{(\|y\|^2 - x_{n+1}^2)^{\frac{n-2}{2}}}{\|y\|^{n-2}} \|y\|^\alpha \|\nabla u(y)\|^p dy_1 \cdots dy_n, \\ \int_{\mathbf{B}^{n+1}} \|x\|^\alpha \|\nabla \bar{u}(x)\|^p dx_1 \cdots dx_{n+1} &\leq n^{p/2-1} \int_{\mathbf{B}^{n+1}} \frac{1}{\|x\|^{p-\alpha}} dx_1 \cdots dx_{n+1} \\ &\quad + 2(1 - 1/n)^{1-p/2} \int_{\mathbf{B}^n} \|y\|^\alpha \|\nabla u(y)\|^p \left(\int_0^{\|y\|} \frac{(\|y\|^2 - x_{n+1}^2)^{\frac{n-2}{2}}}{\|y\|^{n-2}} dx_{n+1} \right) dy. \end{aligned}$$

But we have,

$$\begin{aligned} \int_0^{\|y\|} \left(\frac{\|y\|^2 - x_{n+1}^2}{\|y\|^2} \right)^{\frac{n-2}{2}} dx_{n+1} &= \int_0^{\|y\|} \left(1 - \left(\frac{x_{n+1}}{\|y\|} \right)^2 \right)^{\frac{n-2}{2}} dx_{n+1} \\ &= \int_0^1 \|y\| (1 - t^2)^{\frac{n-2}{2}} dt = \|y\| \int_0^{\pi/2} (\cos \gamma)^{n-1} d\gamma. \end{aligned}$$

Let us set $W_{n-1} = \int_0^{\pi/2} (\cos \gamma)^{n-1} d\gamma$. Then, we have the inequality,

$$\begin{aligned} \int_{\mathbf{B}^{n+1}} \|x\|^\alpha \|\nabla \bar{u}(x)\|^p dx_1 \cdots dx_{n+1} &\leq n^{p/2-1} \int_{\mathbf{B}^{n+1}} \frac{1}{\|x\|^{p-\alpha}} dx_1 \cdots dx_{n+1} \\ &\quad + 2(1 - 1/n)^{1-p/2} W_{n-1} \int_{\mathbf{B}^n} \|y\|^{\alpha+1} \|\nabla u(y)\|^p dy. \quad \blacksquare \end{aligned}$$

Lemma 4. *Let Γ be the Gamma function defined by,*

$$\Gamma(x) = \int_0^{+\infty} t^{x-1} e^{-t} dt.$$

We have,

$$W_{n-1} \frac{\Gamma(\frac{n+1}{2})}{\Gamma(\frac{n}{2})} = \frac{\sqrt{\pi}}{2}.$$

Proof From the equality $\Gamma(x+1) = x\Gamma(x)$ for any $x \in (0, +\infty)$, we have, if $n = 2l$, where $l \in \mathbb{N}$,

$$\Gamma\left(\frac{2l+1}{2}\right) = \frac{2l-1}{2} \frac{2l-3}{2} \cdots \frac{3}{2} \frac{1}{2} \Gamma\left(\frac{1}{2}\right)$$

and

$$\Gamma\left(\frac{2l}{2}\right) = \frac{2l-2}{2} \frac{2l-4}{2} \cdots \frac{2}{2} \Gamma(1).$$

Moreover we have,

$$W_{2l-1} = \frac{(2l-2)(2l-4) \cdots 2}{(2l-1)(2l-3) \cdots 3 \cdot 1}$$

then,

$$W_{2l-1} \frac{\Gamma(\frac{2l+1}{2})}{\Gamma(\frac{2l}{2})} = \frac{\sqrt{\pi}}{2}.$$

If $n = 2l + 1$ where $l \in \mathbb{N}$, we obtain,

$$\Gamma\left(\frac{2l+2}{2}\right) = \frac{2l}{2} \frac{2l-2}{2} \cdots \frac{2}{2} \Gamma(1),$$

$$\Gamma\left(\frac{2l+1}{2}\right) = \frac{2l-1}{2} \cdots \frac{3}{2} \frac{1}{2} \Gamma\left(\frac{1}{2}\right)$$

and

$$W_{2l} = \frac{(2l-1)(2l-3) \cdots 3 \cdot 1}{(2l)(2l-2) \cdots 2} \cdot \frac{\pi}{2}.$$

We deduce that

$$W_{2l} \frac{\Gamma(\frac{2l+2}{2})}{\Gamma(\frac{2l+1}{2})} = \frac{\sqrt{\pi}}{2}. \quad \blacksquare$$

Proof of Theorem 1.1. Suppose that \bar{u}_0 is a minimizer map of $E_{p,\alpha}$. Since the measure of \mathbb{S}^n is $|\mathbb{S}^n| = \frac{2\pi^{\frac{n+1}{2}}}{\Gamma(\frac{n+1}{2})}$ and since $\|\nabla \bar{u}_0\|(x) = \frac{n^{\frac{p}{2}}}{\|x\|}$, by

Lemma 1.3, for any map $u \in W_{\alpha+1}^{1,p}(\mathbf{B}^n, \mathbb{S}^{n-1})$ satisfying $u(y) = y$ on \mathbb{S}^{n-1} , we have,

$$\begin{aligned}
\frac{n^{p/2}}{n+1+\alpha-p} \frac{2\pi^{\frac{n+1}{2}}}{\Gamma(\frac{n+1}{2})} &= \int_{\mathbf{B}^{n+1}} \|x\|^\alpha \|\nabla \overline{u_0}(x)\|^p dx_1 \cdots dx_{n+1} \\
&\leq \int_{\mathbf{B}^{n+1}} \|x\|^\alpha \|\nabla \overline{u}(x)\|^p dx_1 \cdots dx_{n+1} \\
&\leq n^{p/2-1} \int_{\mathbf{B}^{n+1}} \frac{1}{\|x\|^{p-\alpha}} dx_1 \cdots dx_{n+1} \\
&\quad + 2(1-1/n)^{1-p/2} W_{n-1} \int_{\mathbf{B}^n} \|y\|^{\alpha+1} \|\nabla u(y)\|^p dy \\
&\leq \frac{1}{n} \frac{n^{p/2}}{n+1+\alpha-p} \frac{2\pi^{\frac{n+1}{2}}}{\Gamma(\frac{n+1}{2})} \\
&\quad + 2W_{n-1} (1 - \frac{1}{n}) (\frac{n}{n-1})^{p/2} \int_{\mathbf{B}^n} \|y\|^{\alpha+1} \|\nabla u(y)\|^p dy.
\end{aligned}$$

Then we have,

$$\begin{aligned}
2W_{n-1} \left(1 - \frac{1}{n}\right) \left(\frac{n}{n-1}\right)^{p/2} \frac{\int_{\mathbf{B}^n} \|y\|^{\alpha+1} \|\nabla u(y)\|^p dy}{\int_{\mathbf{B}^n} \|y\|^{\alpha+1} \|\nabla \frac{y}{\|y\|}\|^p dy} &\geq \frac{n^{p/2}}{n+1+\alpha-p} \frac{2\pi^{\frac{n+1}{2}}}{\Gamma(\frac{n+1}{2})} \\
&\quad \times \frac{n+1+\alpha-p}{(n-1)^{p/2}} \frac{\Gamma(\frac{n}{2})}{2\pi^{\frac{n}{2}}} \left(1 - \frac{1}{n}\right)
\end{aligned}$$

By Lemma 1.4 we finally get,

$$\int_{\mathbf{B}^n} \|y\|^{\alpha+1} \|\nabla u(y)\|^p dy \geq \int_{\mathbf{B}^n} \|y\|^{\alpha+1} \|\nabla \frac{y}{\|y\|}\|^p dy \quad \blacksquare$$
